

## Module - II

### SQL - Structured Query Language

*Lecture - 7*

## Join Expressions

## SQL – Join Expressions

- **Join Expressions**
  - Joined Relations
  - Natural Join in SQL
  - Join Condition
  - Outer Join
  - Joined Types and Conditions

# Joined Relations

- **Join operations** take **two relations** and return as a result **another relation**.
- A **join operation** is a **Cartesian product** which requires that **tuples** in the **two relations** match (under some condition). It also specifies the **attributes** that are present in the **result** of the **join**.
- The **join operations** are typically used as **subquery** expressions in the **from** clause

# Joined Relations

- Three types of joins:
  - ✓ Natural join
  - ✓ Inner join
  - ✓ Outer join

# Natural Join in SQL

- **Natural join** matches tuples with the same values for all common attributes, and retains only one copy of each common column.
- **Example:** *List the names of instructors along with the course ID of the courses that they taught*

```
select name, course_id
from students, takes
where student.ID = takes.ID;
```

- Same query in SQL with “**natural join**” construct

```
select name, course_id
from student natural join takes;
```

# Natural Join in SQL

- The **from** clause can have **multiple relations** combined using **natural join**:

```
select  A1, A2, ... An
from    r1 natural join r2 natural join ..
natural join rn
where   P ;
```

# Natural Join in SQL

<i>ID</i>	<i>name</i>	<i>dept_name</i>	<i>tot_cred</i>
00128	Zhang	Comp. Sci.	102
12345	Shankar	Comp. Sci.	32

*student* natural join *takes*

# Drawbacks in Natural Join

- Beware of **unrelated attributes** with **same name** which get **equated incorrectly**.
- **Example:** *List the names of students instructors along with the titles of courses that they have taken*

- ✓ **Correct version**

```
select name, title
from student natural join takes, course
where takes.course_id = course.course_id;
```

- ✓ **Incorrect version**

```
select name, title
from student natural join takes natural join course;
```

# Drawbacks in Natural Join

- **Example:** *List the names of students instructors along with the titles of courses that they have taken*

- ✓ **Correct version**

```
select name, title
from student natural join takes, course
where takes.course_id = course.course_id;
```

- ✓ **Incorrect version**

```
select name, title
from student natural join takes natural join course;
```

- This query **omits all** (*student name, course title*) **pairs** where the student takes a course in a department other than the student's own department.
- The **correct version** (above), **correctly outputs** such pairs.

# Natural Join with Using Clause

- To **avoid** the **danger of equating attributes erroneously**, we can use the “**using**” construct that allows us to specify exactly which columns should be equated.
- **Query example**

```
select name, title
from (student natural join takes) join course
using(course_id)
```

# Join Condition

- The **on** condition allows a **general predicate** over the **relations being joined**.
- This predicate is written like a **where** clause predicate except for the use of the keyword **on**.
- **Query example**

```
select *  
from student join takes on student_ID = takes_ID
```

- ✓ The **on** condition above specifies that a tuple from *student* matches a tuple from *takes* if their *ID* values are equal.

# Join Condition

- Equivalent to:

```
select *  
from student , takes  
where student_ID = takes_ID
```

# Outer Join

- An **extension** of the **join operation** that **avoids loss of information**.
- Computes the **join** and then **adds tuples** from **one relation** that does not match tuples in the **other relation** to the **result of the join**.
- Uses *null* values.

# Outer Join

- **Three forms** of **outer join**:
  - ✓ left outer join
  - ✓ right outer join
  - ✓ full outer join

# Outer Join Examples

- Relation *course*

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>
BIO-301	Genetics	Biology	4
CS-190	Game Design	Comp. Sci.	4
CS-315	Robotics	Comp. Sci.	3

- Relation *prereq*

<i>course_id</i>	<i>prereq_id</i>
BIO-301	BIO-101
CS-190	CS-101
CS-347	CS-101

- Observe that
  - *course* information is missing **CS-347**
  - *prereq* information is missing **CS-315**

# Left Outer Join

- *course* **natural left outer join** *prereq*

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>	<i>prereq_id</i>
BIO-301	Genetics	Biology	4	BIO-101
CS-190	Game Design	Comp. Sci.	4	CS-101
CS-315	Robotics	Comp. Sci.	3	<i>null</i>

- In **relational algebra**: *course* ⋈ *prereq*

## Right Outer Join

- *course* **natural right outer join** *prereq*

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>	<i>prereq_id</i>
BIO-301	Genetics	Biology	4	BIO-101
CS-190	Game Design	Comp. Sci.	4	CS-101
CS-347	<i>null</i>	<i>null</i>	<i>null</i>	CS-101

- In **relational algebra**: *course* ⋈ *prereq*

# Full Outer Join

- *course* **natural full outer join** *prereq*

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>	<i>prereq_id</i>
BIO-301	Genetics	Biology	4	BIO-101
CS-190	Game Design	Comp. Sci.	4	CS-101
CS-315	Robotics	Comp. Sci.	3	<i>null</i>
CS-347	<i>null</i>	<i>null</i>	<i>null</i>	CS-101

- In **relational algebra**: *course* ⋈ *prereq*

# Join Types and Conditions

- **Join operations** take **two relations** and return as a **result another relation**.
- These **additional operations** are typically used as **subquery expressions** in the **from** clause
- **Join condition** - defines which **tuples** in the **two relations match**.
- **Join type** - defines how **tuples** in each **relation** that do not match any tuple in the **other relation** (based on the **join condition**) are treated.

# Join Types and Conditions

## *Join types*

**inner join**

**left outer join**

**right outer join**

**full outer join**

## *Join conditions*

**natural**

**on** <predicate>

**using**  $(A_1, A_2, \dots, A_n)$

# Joined Relations - Examples

- *course* **natural right outer join** *prereq*

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>	<i>prereq_id</i>
BIO-301	Genetics	Biology	4	BIO-101
CS-190	Game Design	Comp. Sci.	4	CS-101
CS-347	<i>null</i>	<i>null</i>	<i>null</i>	CS-101

- *course* **full outer join** *prereq* **using** (*course\_id*)

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>	<i>prereq_id</i>
BIO-301	Genetics	Biology	4	BIO-101
CS-190	Game Design	Comp. Sci.	4	CS-101
CS-315	Robotics	Comp. Sci.	3	<i>null</i>
CS-347	<i>null</i>	<i>null</i>	<i>null</i>	CS-101

# Joined Relations - Examples

- *course* **inner join** *prereq* **on** *course.course\_id = prereq.course\_id*

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>	<i>prereq_id</i>	<i>course_id</i>
BIO-301	Genetics	Biology	4	BIO-101	BIO-301
CS-190	Game Design	Comp. Sci.	4	CS-101	CS-190

- **What is the difference between the above, and a natural join?**
- *course* **left outer join** *prereq* **on** *course.course\_id = prereq.course\_id*

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>	<i>prereq_id</i>	<i>course_id</i>
BIO-301	Genetics	Biology	4	BIO-101	BIO-301
CS-190	Game Design	Comp. Sci.	4	CS-101	CS-190
CS-315	Robotics	Comp. Sci.	3	<i>null</i>	<i>null</i>

# Joined Relations - Examples

- *course* **natural outer join** *prereq*

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>	<i>prereq_id</i>
BIO-301	Genetics	Biology	4	BIO-101
CS-190	Game Design	Comp. Sci.	4	CS-101
CS-347	<i>null</i>	<i>null</i>	<i>null</i>	CS-101

- *course* **full outer join** *prereq* **using** (*course\_id*)

<i>course_id</i>	<i>title</i>	<i>dept_name</i>	<i>credits</i>	<i>prereq_id</i>
BIO-301	Genetics	Biology	4	BIO-101
CS-190	Game Design	Comp. Sci.	4	CS-101
CS-315	Robotics	Comp. Sci.	3	<i>null</i>
CS-347	<i>null</i>	<i>null</i>	<i>null</i>	CS-101
